Autoclavable Biohazard Bag

PMSSteripack™

PMSSteripack autoclavable biohazard bags are ideal for processing of biohazardous materials which require autoclaving prior to disposal. They provide a safe handling and efficient solution for your biohazard waste management.

High integrity polypropylene bag withstand 141°C (285°F) maximum autoclave temperature and is designed to resist puncture, tears and leaks.

PMSSteripack autoclavable biohazard bags are available in different sizes and all bags are imprinted with the universal biohazard symbol.

Features

- Red, strong autoclavable bag for biohazard waste
- Designed for STEAM sterilization at max. 141°C
- Puncture, tear and leak resistance
- Will not soften or melt during sterilization
- Clearly imprinted biohazard symbol
